

GSDC Platform

CURRENT SECTIONS:

ABOUT – Change the name to “GSDC” – we can use the landing page developed by Emanuele in its entirety, video included. It does contain all the necessary information.

DASHBOARD: (accessible only after login and successful KYC)

CONTACT: fine for now – Accessible prior to login

TO ADD:

LOGIN/SIGN-UP Button: there will be some sections readable only after a successful login (like the Dashboard). In addition, with the login we need to implement a geofencing rule to restrict access to US customers and from other selected jurisdictions.

TRANSPARENCY (accessible prior to login): with 2 sub sections:

- GSDC in circulation linked with the different network where GSDC will be available (Ethereum then Tron, etc.)
- Reserves and Audit Reports: where we will provide a breakdown (like Tether) of the composition of the Reserve and where we will upload the Reserve Audit downloadable by users (like Tether). So we need to remove the “Proof of Reserve” tables from the Dashboard as it makes no sense. Reserves are will not hold on-chain.

LIVE EXCHANGE RATES (Accessible prior to login)

In this section the user will find the real time value of GSDC in different benchmarks reference, or:

GSDC/USD: equal to the sum of (via API) CNH/USD + BRL/USD + INR/USD + ZAR/USD + IDR/USD + THB/USD

GSDC/CNH: equal to the sum of 1 CNH + BRL/CNH + INR/CNH + ZAR/CNH + IDR/CNH + THB/CNH

GSDC/BRL: equal to the sum of 1 BRL + CNH/BRL + INR/BRL + ZAR/BRL + IDR/BRL + THB/BRL

GSDC/INR: equal to the sum of 1 INR + BRL/INR + CNH/INR + ZAR/INR + IDR/INR + THB/INR

GSDC/ZAR: equal to the sum of 1 ZAR + BRL/ZAR + INR/ZAR + CNH/ZAR + IDR/ZAR + THB/ZAR

GSDC/IDR: equal to the sum of 1 IDR + BRL/IDR + INR/IDR + ZAR/IDR + CNH/IDR + THB/IDR

GSDC/THB: equal to the sum of 1 THB + BRL/THB + INR/THB + ZAR/THB + IDR/THB + CNH/THB

In a second phase we will decide to add also JPY, EUR, CAD, and other major currencies.

LEGAL TERMS (section accessible from the footer) will include the following

1. Terms of Service

2. Privacy and Anti-spam policy
3. Law Enforcement Request
4. Cookies Notice
5. Risk disclosure

UI – UX Improvement Comments:

Home Screen – accessible by clicking on the logo:

- Redesign the Live Exchange Rates panel to be a smaller floating card with transparency and rounded corners. It will be linked to the sections Live Exchange Rates. In the Home Screen we will only show the value of GSDC in the different currencies and not also the all cross-currency exchange rates.
- Include a progress hint under “Get Started,” like: “Step 1: Login → Step 2: Quick KYC → Step 3: Mint GSDC” so users know what to expect.
- Update currency boxes to modern cards: white backgrounds, thin shadows, currency icons, and minimal text.
- Animate stats like “10M+ GSDC in circulation” as they appear on screen (the count that start from 0 and go fast to 10m), same for 50+ countries and 99.9% uptime.

KYC / Minting Page

- Improve document upload with a “Drag-and-drop” upload zone with live progress.
- Replace the red “Not Submitted” with a cleaner status: Yellow “Pending Verification” → Green “Approved”.

User Flow Simplification

- Combine Sign-up and KYC so the user flows naturally into verification without extra clicks. After the login that will serve to check the jurisdiction from which the user is logging in, the flow must be direct to KYC procedure.
- After document upload, show instant feedback and estimated verification time. Like “KYC Processed within 24 hours”.
- Once KYC is approved, redirect automatically to the minting/buying page. Once KYC is approved, the user should receive confirmation on the email used for signing-up.
